----------------------	--------------	--------------

 For the most analytically sensitive (down to less than 0.01 pg/mL), specific and quantitative assay for hepatitis B virus, HBV DNA UltraQuant (test code #8137) is recommended, if clinically indicated. Changes in HBV viral load by HBV DNA UltraQuant are useful for the diagnosis and monitoring patient's response to antiviral therapy.

HEPATITIS Be VIRUS ANTIGEN

Hepatitis Be Antigen	Not detected	Not detected
----------------------	--------------	--------------

For the most analytically sensitive (down to less than 0.01 pg/mL), specific and quantitative assay for hepatitis B virus, HBV DNA UltraQuant (test code #B137) is recommended, if clinically indicated. Changes in HBV viral load by HBV DNA UltraQuant are useful for the diagnosis and monitoring patient's response to antiviral therapy.

HEPATITIS B VIRUS DNA ULTR

Picogram

100,000,000 Copies per CC.

HEPATITIS B VIRUS DNA ULTRAQUANT, PCR: Hepatitis B Virus (HBV) DNA UltraQuant detects and quantitates HBV viral concentrations at the chronic or acute stage of viremia. Patients with low HBV concentrations (less than 100 pg/mL) respond to treatment with interferon significantly better than patients with circulating HBV DNA concentrations in excess of 200 pg/mL. The sensitivity of HBV DNA UltraQuant makes this test suitable for monitoring response to therapy. Note that 150,000 copies of viral DNA is equivalent to 1 picogram.

 For the most analytically sensitive (down to less than 0.01 pg/mL), specific and quantitative assay for hepatitis B virus, HBV DNA UltraQuant (test code #8137) is recommended, if clinically indicated. Changes in HBV viral load by HBV DNA UltraQuant are useful for the diagnosis and monitoring patient's response to antiviral therapy.

DATE OF EXAM: 03/27/2004

ABDOMINAL ULTRASOUND:

Clinical History: Chronic hepatitis B.

Multiple longitudinal and cross-sectional transabdominal real-time images were obtained.

The liver is normal in size (measuring 13.1 cm) and position, demonstrating normal uniform echogenicity with no evidence of mass, cystic or solid. There is no evidence of intrahepatic biliary or portal dilatation. The gallbladder is normal in size and contour with no evidence of thickening of the wall or echoes within the lumen. The common bile duct is normal in size, measuring approximately 5.0 mm.

The visualized spleen (measuring 10.4 cm) is unremarkable. The pancreas is not visualized due to body habitus. The visualized portions of the aorta are normal in course and caliber.

The right kidney measures 11.4 cm x 4.2 cm x 5.8 cm. The left kidney measures 11.6 cm x 5.1 cm x 5.6 cm. The kidneys are normal in contour and echogenicity with no evidence of mass, calculus or hydronephrosis. The renal cortices are of normal thickness and the corticomedullary junctions are well delineated.

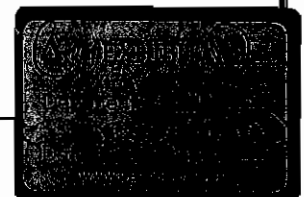

IMPRESSION:

1. VISUALIZED STRUCTURES ARE UNREMARKABLE.
2. NONVISUALIZATION OF PANCREAS.

Thank you for your referral.

ABDOMINAL ULTRASOUND:

DATE: 10/02/98

Multiple real-time images of the abdomen were obtained.

The liver is normal in size and position demonstrating normal, uniform echogenicity without focal cyst or solid mass. There is no evidence of intrahepatic biliary or portal dilatation. The gallbladder is normal without evidence of calculi or wall thickening. There is no pericholecystic fluid collection. The common bile duct is of normal diameter measuring 4.5 mm.

The visualized pancreas and spleen are both normal. The visualized portions of the aorta are normal in course and caliber.

The right kidney measures 10.5 cm x 5.2 cm x 4.7 cm. The left kidney measures 11.7 cm x 5.0 cm x 5.0 cm. There is no evidence of hydronephrosis or mass. The renal cortices are of normal thickness and the corticomedullary junctions are well-delineated.

IMPRESSION: NORMAL ABDOMINAL ULTRASOUND.

Custodian's Certification of Records

I, undersigned, being the duly authorized custodian of records for:

SAM KAM GI
17170 COLIMA ROAD, SUITE E
HACIENDA HEIGHTS, CA 91745

With personal knowledge of the facts set forth below, and authority to certify said records do hereby attest to the following facts:

I am an employee of the above organization and have personal knowledge of the procedures and practices reflected in the records.

The records pertain to: **BANG-CHAO LIN**
Date of Birth: 8/06/69

Social Security Number: 85-66-4606

Including this certificate, all records called for and described in the attached authorization with which I was served have been provided to a COMPEX agent pursuant to Evidence Code Section 1560, with the exception of the documents (if any) listed below.

These records were: ☐ Mailed to COMPEX on:

☒ Presented to COMPEX on 11-1-06 for duplication.

The records were prepared in the ordinary course of business, by the personnel of said business for which I am the custodian of records, at or near the time of the acts, conditions, or events depicted therein. As custodian, I testify to the records identity and method of preparation. The source of the information and method of preparation were such as to indicate their trustworthiness. If I were called as a witness in this matter, I could and would competently testify under oath to these facts.

AUTHORIZATION

This Authorization has been designed to comply with the requirements of federal rules adopted pursuant to the Health Insurance Portability and Accountability Act ("HIPAA").

The Company(ies) indicated above is(are) referred to as "the Company" in this Authorization. Metropolitan Life Insurance Company ("MetLife") provides services related to claims investigation and settlement for its affiliates, the Companies listed above, and is authorized to request investigative information on the Company's behalf.

Please Print

Name of Insured:

BANG C. LIN

Date of Birth:

8/6/69

Policy Number(s):

204 126 416 ET

For claims investigation and settlement purposes, I authorize:

- Any medical practitioner or facility or related entity; pharmacist or pharmacy; any insurance company, employer, group policyholder or contract holder; and any benefit plan administrator or other third party administrator to give the Company, an employee or representative of the Company or any third party acting on the Company's behalf in this regard personal information and data about the Insured named above (the "Insured"), including the following:
 - Entire medical record for the last ten (10) years, including information, records and data about the Insured (such as office visits, outpatient treatment, hospitalization, drugs prescribed, medical test results, autopsy reports, and information about sexually transmitted diseases);
 - Information relating to Acquired Immune Deficiency Syndrome (AIDS) or AIDS related conditions, including Human Immunodeficiency Virus (HIV) test results, about the Insured;
 - Information, records and data about the Insured relating to alcohol or drug use, including information, records and data protected by federal law (42 CFR part 2); and
 - Information, records and data about the Insured relating to mental illness.
- The Company to request and obtain consumer or investigative consumer reports about the Insured.
- Any employer, business associate, financial institution, motor vehicle department or government agency to include the Social Security Administration to give the Company or its authorized representative or any consumer reporting agency preparing an investigative consumer report on the Company's behalf, any information or data that it may have about the occupation, avocations, driving record, finances, character, reputation and aviation activities of the Insured.

I understand that:

- All or part of the information, records and data that the Company receives pursuant to this Authorization may be disclosed to and used by any reinsurer, employee, affiliate or independent contractor who performs a business service for the Company regarding the policies identified above, or as otherwise required or permitted by applicable law.
- The Company may redisclose such information, records and data (other than information relating to HIV test results) about the Insured received in accordance with this Authorization as described here, as authorized by the Insured (or the Insured's legally authorized representative) or as otherwise permitted or required by applicable laws.
- Alcohol or drug abuse information may be protected by Federal Regulations 42 CFR part 2. Medical information, records and data that may have been subject to federal and state laws or regulations setting forth standards for the use, maintenance and disclosure of such information by health care providers and health plans, once disclosed to the Company, may no longer be covered by those laws or regulations.
- Information relating to HIV test results will only be disclosed as specifically authorized or as required by applicable law.
- This Authorization will end 12 months from the date on this form or sooner if prescribed by law.
- I may revoke this Authorization at any time by writing to the Company and advising it that I have revoked this Authorization. Any action taken before the Company has received my revocation will be valid.
- I have the right to refuse to sign the Authorization, but if I do not, the Company will be unable to process the claim for benefits.
- I have a right to receive a copy of this form.

A photocopy of this form is as valid as the original form.

BANG, LIN

03-30-06: Mr. Bang is currently doing well. He has no complaints at all. He denies any shortness of breath or bone pain. Overall, he reports excellent health. His weight has remained stable.

PHYSICAL EXAMINATION:

GENERAL - the patient is a well-developed, well-nourished Vietnamese male in no acute distress. VITAL SIGNS - KPS 80% P 98 R 16 BP 112/86. LYMPH NODES - no cervical, axillary, supraclavicular, or inguinal adenopathy is noted. LUNGS - clear to auscultation and percussion. HEART - S1 and S2 without any extra heart sounds or murmurs. ABDOMEN - soft, nontender, and nondistended, without evidence of hepatosplenomegaly. EXTREMITIES - no edema.

DATA REVIEW:

1. An oblong 5 mm opacity in the left lateral costophrenic sulci in the left lower lobe was unchanged. There were no other pulmonary nodules. There was no mediastinal or hilar adenopathy. There were no liver lesions. The thickening in the gastric body remained 2.5 cm. There were no enlarged mesenteric or retroperitoneal lymph nodes. The pancreas and gallbladder were normal. The pelvis was normal.

IMPRESSION:

Mr. Bang has stage III, T3 N2 M0, invasive poorly differentiated adenocarcinoma of the stomach. Upon initial presentation, he was noted to have "multiple" metastatic lymph nodes in the mesentery and retroperitoneum. In the mesentery, there is a confluence of metastatic lymph nodes near the roots of the mesentery. This confluence of lymphadenopathy measured up to 6.1 x 3 cm with corresponding marked focal uptake. Additional metastatic lymph nodes in the periaortic and paracaval chains of the retroperitoneum, particularly in the left periaortic chains. These measure up to 2.5 cm. After four cycles of neoadjuvant Taxotere, cisplatin, and 5-FU with Avastin, the patient has had a substantial response. His lymphadenopathy has completely resolved.

WARREN H. FONG, M.D.
Medical Oncology and Hematology
351 Hospital Road, Suite 305
Newport Beach, California 92663
(949) 574-1610

Page Two

BANG, LIN

03-30-06: IMPRESSION - (CONTINUED):

The thickening has remained the same. The CAT scan is not an ideal way of looking at the stomach. The stomach is relatively thin and folds upon itself giving an appearance of thickness. The true thickness of the stomach cannot be ascertained. Only an endoscopy would be useful in monitoring response. However, endoscopy is invasive. Furthermore, cancer only moves in one direction. If all his lymph nodes have dramatically evaporated, then one can safely assume that his stomach lesion has also significantly improved.

The patient is scheduled for a surgical resection with curative intent by Dr. Suryl Bhoyrol at Scripps.

Following the resection, the patient will receive epirubicin, cisplatin, 5-FU, and Avastin. This is a non-cross reactive switch in his chemotherapy between epirubicin and Taxotere. He will, therefore, have seen the most active agents against gastric cancer.

Granted the use of Avastin in gastric cancer does not have a lot of data supporting it. However, we must remember that stage III gastric cancer has a dismal prognosis. The type of response that we are currently seeing in this patient is not the typical response seen in patients with stage III gastric cancer. Therefore, even though Blue Cross has deemed it investigational and denied claims, I still recommend its usage.

We have also learned by this new adjuvant exercise that the patient's systemic disease, i.e., micrometastatic disease is sensitive to chemotherapy. Chemotherapy cannot eradicate macrocytic disease. However, it can eradicate microcytic disease. Therefore, there is a change that the neoadjuvant chemotherapy and the followup adjuvant chemotherapy may eradicate the disease in his lungs and liver, which we do not see, but know that it is there. We know it is there, because the natural history of the disease is to present with lung and liver metastases following surgery.

Page Three

BANG, LIN

03-30-06: IMPRESSION - (CONTINUED):

The patient was advised against adopting a vegetarian-vegan diet. Utilizing the Japanese migration study, Asians have a higher incidence of gastric cancer, because of the high fiber/low fat diet. A vegan diet would theoretically recreate the same situation where Asians develop gastric cancer. The risk of gastric cancer is markedly reduced to the rate in Caucasian when they adopt the American diet. However, nothing is free, with the adoption of the American diet, it increases the risk of colon carcinoma, breast cancer, and heart disease. Therefore, I would not try any dietary manipulations.

PLAN:

The patient will go forth with surgery.

BANG, LIN

02-17-06: Mr. Bang is currently doing relatively well. He denies any chest pain. Overall, he feels his situation is improved. He is eating better. He no longer has abdominal pain.

PHYSICAL EXAMINATION:

GENERAL - the patient is a thin Vietnamese male in no acute distress. VITAL SIGNS - KPS 80% BP 112/70 P 86 R 18 LYMPH NODES - no cervical, axillary, supraclavicular, or inguinal adenopathy is noted. LUNGS - clear to auscultation and percussion. HEART - S1 and S2 without any extra heart sounds or murmurs. ABDOMEN - soft, nontender, nondistended, without evidence of hepatosplenomegaly. EXTREMITIES - no edema.

DATA REVIEW:

1. CT scan chest, abdomen, and pelvis, dated 2-15-06, revealed no pulmonary nodules. There was no supraclavicular, axillary, or mediastinal adenopathy. The wall thickness of the gastric body and pyloric region continues to measure 2.5 cm. There was no evidence of duodenal involvement. Previously identified mesenteric lymph node mass had markedly regressed, as had the periaortic and retroperitoneal lymphadenopathy. A 1.1 cm lymph node was seen in the left retroperitoneum adjacent to the aorta just below the level of the renal vein. The enlarged lymph nodes in the hypogastric region had markedly decreased. By size criteria, no abnormality existed at this time. The liver, spleen, gallbladder, pancreas, and kidneys appeared normal. The pelvis was without any mass or adenopathy. Original measurements were a mesenteric mass which measured 6.1 x 3 cm., and retroperitoneal lymph nodes which measured 2.5 cm.

IMPRESSION:

Mr. Bang has stage III, CT3 N2 M0, gastric carcinoma. He has undergone two cycles of Taxotere, cisplatin, and 5-FU. He has had a dramatic response with near resolution of his surrounding lymphadenopathy. Although the stomach does not show any signs of regression, a CAT scan is a poor method of measuring response in the stomach region

BANG, LIN

02-17-06: IMPRESSION - (CONTINUED):

One must assume that the dramatic response seen in the lymph nodes also have occurred in the stomach. Furthermore, all his GI complaints have resolved. This would only have resolved if he had response in the stomach, not in the lymph nodes.

As the patient has had a dramatic response, we will hold off on radiation therapy for his third and fourth cycles. He is scheduled for surgical resection on April 10, 2006. The abandonment of radiation for now was at the requests of Dr. Suryl Bhoyrol and Dr. Shaffer who feel that it would make an easier surgery.

Of note, the patient also has had a dramatic decline in his CEA. His CEA went from a high of 197 to 72.

PLAN:

The patient will have a creatinine clearance. We have scheduled him for third and fourth cycles of TPF. Tentative surgery is scheduled for April 10, 2006.

CLINICAL HISTORY

PRE OP DIAGNOSIS

antral cancer

SPECIMEN IDENTIFICATION

gastric biopsy

Gross:

Specimen consists of 4 fragments of gray tan soft tissue measuring 0.1 to 0.4 cm.

Microscopic Diagnosis:

Gastric biopsy: Fragments of poorly differentiated infiltrating adenocarcinoma of stomach displaying areas of ulceration on the surface.

Only a few benign gastric mucosal glands are noticed on the surface of the neoplastic tissue.
